#### 1 Introduction

The quantumarticle document class is the preferred document class for papers that will be submitted to Quantum – the open journal of quantum science. It is based on the widely used article document class and designed to allow a seamless transition from documents typeset with article, revtex4-1 and the elsarticle document classes.

As Quantum is an arXiv overlay journal, all papers have to be submitted to the arXiv. To make this submission process as user-friendly as possible, the quantum article document class implements a number of arXiv-specific checks, which however can be deactivated via the option noarxiv.

An example for this is a check that is meant to make sure that the arXiv produces a PDF file and that hyperlinks are correctly broken across multiple lines. To ensure this, the arXiv recommends putting

#### \pdfoutput=1

within the first 5 lines of your main LaTeX file. By default, the quantumarticle document class will throw an error if this line is missing. Just like other similar checks, this can be deactivated by means of the noarxiv option, or only this specific check can be deactivated via the option nopdfoutputerror.

Giving the noarxiv option also disables a number of other features of quantum article and removes any Quantum related branding from the document. Authors who would like to keep the checks active but still use this document class for manuscripts not intended for submission to Quantum and therefore without Quantum branding can use the unpublished option.

One feature deactivated by both unpublished and noarxiv for example, is the "title click feature" of quantumarticle. As this document class can be used for arbitrary documents, Quantum implements a feature where readers can, by clicking on the title of a manuscript, verify whether this manuscript was actually published by Quantum. Obviously this is an unwanted feature in any manuscript not accepted in Quantum and it can thus be deactivated with the unpublished option.

## 2 Typesetting documents

The following are guidelines for the usage of the quantum article document class for manuscripts to be submitted to or accepted in Quantum. A detailed description of the functionality and options of the document class follow in Section 3.

#### 2.1 Recommendations on structure

In the twocolumn layout and without the titlepage option a paragraph without a previous section title may directly follow the abstract. In onecolumn format or with a dedicated titlepage, this should be avoided.

Longer articles should include a section that, early on, explains the main results, their limitations, and assumptions. This section can be used to, for example, present the main theorem, or provide a summary of the results for a wider audience.

#### 2.2 Title information

The title of the document is given via the common title command. Note that clicking the title performs a search for that title on quantum-journal.org. In this way readers can easily verify whether a work using the quantumarticle class was actually published in Quantum. By giving the accepted=YYYY-MM-DD option, with YYYY-MM-DD the acceptance date, the note "Accepted in Quantum YYYY-MM-DD, click title to verify" can be added to the bottom of each page to clearly mark works that have been accepted in Quantum.

You should call \maketitle before your running text starts.

#### 2.2.1 Authors and affiliations

You can provide information on authors and affiliations in the common format also used by revtex:

```
\author{Author 1}
\author{Author 2}
\affiliation{Affiliation 1}
\author{Author 3}
\affiliation{Affiliation 2}
\author{Author 4}
\affiliation{Affiliation 1}
\affiliation{Affiliation 3}
```

In this example affiliation 1 will be associated with authors 1, 2, and 4, affiliation 2 with author 3 and affiliation 3 with author 4. Repeated affiliations are automatically recognized and typeset in superscriptaddress style. Alternatively you can use a format similar to that of the authblk package and the elsarticle document class to specify the same affiliation relations as follows:

```
\author[1]{Author 1}
\author[1]{Author 2}
\author[2]{Author 3}
\author[1,3]{Author 4}
\affil[1]{Affiliation 1}
\affil[2]{Affiliation 1}
\affil[3]{Affiliation 1}
```

#### 2.2.2 Other author related information

The quantum article document class supports further commands that are author specific:

Command	Description
email	E-Mail address of the author, displayed in the bottom of the page.
homepage	Homepage of the author, displayed in the bottom of the page.
thanks	Additional text that is displayed in the bottom of the page.
orcid	If the ORCiD of the author is given, his name will become a link to his ORCiD profile.

#### 2.3 Abstract

The abstract is typeset using the common abstract environment. In the standard, twocolumn, layout the abstract is typeset as a bold face first paragraph. In onecolumn layout the abstract is placed above the text. Both can be combined with the titlepage option to obtain a format with dedicated title and abstract pages that are not included in the page count. This format can be more suitable for long articles. The abstract environment can appear both before and after the \maketitle command and calling \maketitle is optional, as long as there is an abstract. Both abstract and \maketitle however must be placed after all other \author, \affiliation, etc. commands.

#### 2.4 Sectioning

Sections, subsections, subsubsections, and paragraphs should be typeset with the standard LaTeX commands. The paragraph is the smallest unit of sectioning. Feel free to end the paragraph title with a full stop if you find this appropriate.

#### 2.5 Equations

You can use the standard commands for equations. For multi-line equations align is preferable over eqnarray, please refrain from using the latter. For complex equations you may want to consider using the IEEEeqnarray environment from the IEEEtrantools package.

How you refer to equations is up to you, but please be consistent and use the \eqref{...} command instead of writing (\ref{...}).

As a courtesy for your readers and referees, please suppress equation numbers only if there is a specific reason to do so, to not make it unnecessarily difficult to refer to individual results and steps in derivations.

Very wide equations can be shown expanding over both columns using the widetext environment. In onecolumn mode, the widetext environment has no effect. To enable this feature in twocolumn mode, quantumarticle relies on the package ltxgrid. Unfortunately this package has a bug that leads to a sub-optimal placement of extremely long footnotes.

#### 2.6 Floats

Every floating element must have an informative caption and a number. The caption can be placed above, below, or to the side of the figure, as you see fit.

Feel free to place them at the top or bottom of the page, or in the middle of a paragraph as you see fit. Try to place them on the same page as the text referring to them. A figure on the first page can help readers remember and recognize your work more easily.

#### 2.6.1 Figures

Figures are typeset using the standard figure environment for single-column figures and figure\* for multi-column figures.

#### 2.6.2 Tables

Tables are typeset using the standard table environment for single-column tables and table\* for multi-column tables.

#### 2.7 Plots

Quantum provides a Jupyter notebook to create plots that integrate seamlessly with quantumarticle.

#### 2.8 Footnotes

Footnotes are typeset using the footnote command. They will appear in the bottom of the page. Please do only use footnotes when appropriate and do not mix footnotes with references.

#### 2.9 References

Citations to other works should appear in the References section at the end of the work.

Important: As Quantum is a member of Crossref, all references to works that have a DOI must be hyperlinked according to the DOI. Those links must start with https://doi.org/ (preferred), or http://dx.doi.org/. Direct links to the website of the publisher are not sufficient. This can be achieved in several ways, depending on how you are formatting your bibliography.

#### 2.9.1 Manual bibliography

Suppose the DOI of an article that you want to cite is 10.22331/idonotexist. If you are formatting your bibliography manually, you can cite this work using the following in your thebibliography environment:

```
\bibitem{examplecitation}
Name Surname,
\href{https://doi.org/10.22331/
idonotexist}{Quantum
\textbf{123}, 123456 (1916).}
```

Important: If you are formatting your bibliography manually, please do not group multiple citations into one \bibitem. Having to search through multiple references to find the cited result makes your work less accessible for authors and grouping references can screw up our automatic extraction of citations.

#### 2.9.2 BibTeX bibliography

We encourage the use of BibTeX to generate your bibliography from the BibTeX meta-data provided by publishers. For DOI linking to work, the BibTeX file must contain the doi field as for example in:

```
@article{examplecitation,
author = {Surname, Name},
title = {Title},
journal = {Quantum},
volume = {123},
page = {123456},
year = {1916},
doi = {10.22331/idonotexist},
}
```

Several authors had problems because of Unicode characters in their BibTeX files. Be advised that BibTeX does not support Unicode characters. All special characters must be input via their respective LaTeX commands.

natbib If you are using BibTeX, you can load the natbib package by putting

```
\usepackage[numbers,sort&compress]{natbib}
```

in the preamble of your document and then use the plainnat citation style by including your BibTeX bibliography mybibliography.bib where you want the bibliography to appear as follows:

```
\bibliographystyle{plainnat}
\bibliography{mybibliography}
```

The quantumarticle class automatically detects that the natbib package was loaded and redefines the \doi command to create hyperlinks. This is likely the easiest option if you are converting from another document class.

BibLaTeX If you want to use BibLaTeX, you can instead add

```
\usepackage[backend=bibtex]{biblatex}
\addbibresource{mybibliography.bib}
```

to the preamble of your document and then output the bibliography with

```
\printbibliography
```

where appropriate. You then have to upload the .bbl file along with the other source files when submitting to the arXiv. Due to incompatibilities between different BibLaTeX versions we unfortunately cannot recommend this option.

The quantumarticle class automatically detects that the bibliatex package was loaded, sets the default option doi=true to include the DOI in the bibliography, and declares a suitable field

format to make it a hyperlink. Due to issues with biber we recommend to use the bibtex backend of biblatex.

Feel free to change the appearance of citations in any way you like by using a different bibliographystyle or via the advanced mechanisms provided by BibLaTeX. The only two requirements are that citations must uniquely identify the cited work and that they must contain a DOI hyperlink whenever possible.

#### 2.10 Appendix

Quantum allows the usage of appendices. Ideally, the command \appendix should be put before the appendices to get appropriate section numbering. The appendices are then numbered alphabetically, with numeric (sub)subsection numbering. Equations continue to be numbered sequentially. You are free to change this in case it is more appropriate for your article, but a consistent and unambiguous numbering of sections and equations must be ensured.

If you want your appendices to appear in onecolumn mode but the rest of the document in twocolumn mode, you can insert the command \onecolumn\newpage before \appendix.

#### 2.11 Recommended packages

Quantum encourages you to load the following extra packages:

\usepackage[utf8]{inputenc}
\usepackage[english]{babel}
\usepackage[T1]{fontenc}
\usepackage{amsmath}
\usepackage{hyperref}

If you do not load the hyperref package, quantum article automatically loads it for you. Packages that change font settings, such as times or helvet should be avoided.

## 3 Package options

The quantumarticle document class provides a multitude of package options that change the appearance of the final document to the liking of the user. Default options that need not be given are marked with (default). Options that are only provided for compatibility reasons and that will not alter the typesetting of the document are marked with (C).

#### 3.1 Document setup

#### 3.1.1 Document format

The document class does not specify a default paper size and an error is raised if none is specified. The reason for this is that different LaTeX compilers and localizations can cause paper sizes to vary between setups and this can lead to unexpected results when multiple authors collaborate on a document and the final typesetting is performed by a third party, such as the arXiv.

Option	Description
a4paper	Sets the paper size to ISO A4.
a5paper	Sets the paper size to ISO A5.
b5paper	Sets the paper size to ISO B5.
letterpaper	Sets the paper size to ANSI Letter.
legalpaper	Sets the paper size to ANSI Legal.
executivepaper	Sets the paper size to ANSI Executive.

#### 3.1.2 Orientation

By default, the orientation is portrait.

Option	Description
landscape	Sets the orientation of the document to landscape.

#### 3.1.3 Fontsize

By default, the fontsize is 10pt.

Option	Description
10pt (default)	Sets the normal fontsize to 10pt.
11pt	Sets the normal fontsize to 11pt.
12pt	Sets the normal fontsize to 12pt.

#### 3.1.4 Sides

By default, the setting is oneside.

Option	Description
oneside (default)	Prepares the document onesided.
twoside	Prepares the document two sided.

#### 3.1.5 Titlepage

By default, the document class is typeset with no extra titlepage.

Option	Description	
titlepage notitlepage (C)	Displays the title on a separate titlepage. Displays the title on the same page as the text.	

#### 3.1.6 Draft

By default, the document class is typeset as final.

Option	Description
draft	Marks the document as a draft.
final (default)	Does not mark the document as a draft.

### 3.2 Style options

#### 3.2.1 Equations

By default, equations are typeset centered, with equation numbers on the right.

Option	Description
fleqn	Display equations left aligned.
leqno	Display equation numbers to the left of the equation.

#### 3.2.2 Bibliography

Option	Description
openbib	Display elements of bibliography entries on separate lines, see here.

#### 3.3 Pre-loaded packages

The document class only loads packages necessary for its operation, such as **geometry** or **hyperref**. For compatibility reasons, there are commands that load certain widely used packages for the user.

Option	Description
amsfonts	Load the package amsfonts.
noamsfonts (C)	Don't load the package amsfonts.
amssymb	Load the package amssymb.
amssymbol	"
noamssymb (C)	Don't load the package amssymb.
amsmath	Load the package amsmath.
noamsmath (C)	Don't load the package amsmath.

#### 3.4 Publication

By default, all documents that are created with the quantumarticle document class are treated as possible submissions to Quantum.

Option	Description
accepted=YYYY-MM-DD unpublished	Adds the note 'Accepted in Quantum YYYY-MM-DD' to the document. Intended for works that are not published in Quantum. Disables all
noarxiv	Quantum-related branding.  Intended for works that are not meant to be uploaded to the arXiv. Disables all arXiv-related sanity checks in the document. This option also sets unpublished.

#### 3.5 Compatibility

The quantumarticle class aims to be maximally compatible with documents that were previously typeset with other document classes. For this reason, a number of options are present for the sole purpose of compatibility but do not have any effect on how your document will be typeset These include:

Option	Description
checkin (C)	No effect.
preprint (C)	"
reprint (C)	"
manuscript (C)	"
noshowpacs (C)	"
showpacs (C)	"
showkeys (C)	"
noshowkeys (C)	"
balancelastpage (C)	"
nobalancelastpage (C)	"
nopreprintnumbers (C)	"
preprintnumbers (C)	"

## 4 Contributing

In case you encounter problems using the article class please consider opening a bug report in our bug-tracker on GitHub. You can also contact us via email under latex@quantum-journal.org, but it may take significantly longer to get a response. In any case we need the full source of a document that produces the problem and the log file showing the error to help you.

Improvements submitted as pull requests against the develop branch are very much appreciated!
